

VEXO Solar Panel Guard Kit

VEXO solar panel guard kits are designed to keep birds from getting under solar panels, to protect the roof, electrical wiring and panels from damage. This system securely protects panels without damaging or voiding panel warranty.

Installation Guide

Tools required: **Gloves, metal snips, pliers.**

1. Roll out the mesh and align the top edge of the mesh along the top edge of the solar panel. Allow the mesh to curve and flare out along the roof, this ensures rodents and birds cannot access under the mesh.
2. Hold the fastening rod so the hook is upright, then insert the fastening rod through the mesh grid just below the bottom edge of the panel and hook the back lip of the solar panel bracket. Pull on the rod to make sure it is securely attached.
3. Attach the fastening washer and push firmly to the end to tightly secure the mesh.
4. Place fastening clips every 30 – 40 cm along the underside of the solar panel frame.
5. When joining the next section of mesh, overlay approximately 10 cm and secure the two pieces with fastening rod and cable ties to create a complete barrier.
6. For outer corners: cut upwards from the bottom enough to create a relief. Cut a section of mesh to cover any gaps using cable ties to fix the corner piece in place.
7. For inner corners: cut the mesh upwards from the bottom and overlay one side onto of the other, secure the overlay sections together using cable ties.

Warranty

VEXO Solar Panel Guard Kit has a 5 year manufacturer's warranty against faulty or defective parts only. Warranty does not cover incorrect installation or mishandling of parts.
